

The largest Scottish distillery has awarded the order for a multiple step anaerobic / aerobic wastewater treatment plant with subsequent water reuse to **Veolia Water Solutions & Technologies UK** and **Aquantis**. A Reverse Osmosis system was supplied by our sister company **VWS Deutschland**, formerly **Elga Berkefeld**. This project proves how beneficial it is for the client to use the synergies of the Veolia group of companies and to obtain a range of different technologies from one source.

Aquantis supplies a complete Biosep<sup>®</sup> filtration unit equipped with hollow fibre membranes which has a substantial capacity of 300 m<sup>3</sup>/h. The filtration unit will be pre-assembled and tested and then delivered to site.
